

## **EMR helps providers to obtain an accurate medication list for the patients**

Surescripts operates the nation's largest e-prescription network and supports rapidly expanding health care organizations nationwide. With e-prescribing capabilities through Surescripts, physicians are able to send electronic prescriptions to roughly 95 percent of all U.S. pharmacies, including mail order companies.

PowerChart Ambulatory, in junction with Surescripts, connects pharmacies, nurses, and physicians, keeping everyone informed and up to date for advanced patient safety and optimum care. Physicians are able to see all medications prescribed for any particular patient within the past two years by utilizing the External RX History button in owerchart; which in turn, helps physicians keep a more accurate record of Medications.

External History will help providers identify medication contraindications along with a patient's complete list of current medications and subscribers. A concise list of pharmacies, medications, providers and last fill date is at your fingertips.

Clearly, having External History function in powerchart allows physicians to easily obtain the current medication list to help assist in provided the highest quality of care to their patients.
